- The main reason why the value of the firm is not always reflected in the stock price is that the market is not always efficient. The market may be inefficient due to a variety of factors, including information asymmetry, market frictions, and behavioral biases. For example, if a firm has a large amount of valuable information that is not reflected in its stock price, the market may be inefficient. This can lead to a misvaluation of the firm's value, which can result in a lower stock price than what the firm's true value would be.
